

The Plantsmith Nursery Growing greener

Strong demand for locally grown plants led to the birth of The Plantsmith Nursery, a business that aims to be as 'green' as possible.

The nursery:

- does not use pesticides, fungicides or growth regulants
- minimises use of herbicide
- uses renewable media components
- uses controlled release fertiliser instead of fertigation, which minimises nutrient run-off
- no longer irrigates its lawn during the dry season
- recycles pots by sterilizing and re-using them.

The Plantsmith Nursery is part of a small pilot group of horticultural businesses engaged with the NT Sustainable Land Use Practices project.

Strong demand for locally grown plants led to the birth of The Plantsmith Nursery, a business that aims to be as 'green' as possible.
