

Public Environment Report for East Point Outfall works

We're upgrading Darwin's sewerage system

A major project is underway to upgrade Darwin's sewerage system, which will close the Larrakeyah outfall and divert flows from the Darwin CBD and Larrakeyah to the Ludmilla Wastewater Treatment Plant.

The Ludmilla Wastewater Treatment Plant will be upgraded to manage the additional load, which once treated, will be discharged via the outfall at East Point.

The project includes duplicating the existing rising main that will transport flow from Ludmilla Wastewater Treatment Plant to the East Point Outfall and extending the East Point Outfall itself further out to sea, in order to take better advantage of strong currents and tidal movement.

We're preparing a Public Environment Report

Power and Water is currently preparing a Public Environment Report (PER) to assess and determine how best to manage any environmental impacts associated with duplicating the rising main to East Point and extending the East Point Outfall.

The timing of construction for the East Point Outfall works will depend on the outcome of the PER.

When the PER has been prepared and submitted to the Department of Natural Resources, Environment, the Arts and Sport (NRETAS) it will be made available for public comment for 28 days. The proposed release date of the PER is late 2011.

At the close of the public comment period an Assessment Report will be developed by NRETAS, which will contain the relevant Minister's determination and also include any suggestions or recommendations concerning conditions which will minimise potential environmental impacts.
