

## Group Training Northern Territory Cutting the carbon

In line with its goal to become a model corporate citizen, Group Training NT started implementing a carbon abatement strategy in mid-2009.

The strategy includes initiatives such as:

- a waste reduction and recycling program in offices and adding Toyota Hybrid Camry vehicles to the company fleet
- joining the Eco Biz NT program
- refitting head office with LED lights and bathrooms with water efficient fixtures
- amending the purchasing policy and cleaning contract to consider environmental impacts in the products and services used
- purchasing foot operated power boards to remove standby power at workstations at the close of business each day
- purchasing accredited carbon offsets through the National Greening Australia Breathe Easy campaign and partnering with Greening Australia NT in a tree planting program to offset emissions.

The company is also sponsoring two electrical apprentices, hosted by Power and Water, to complete EcoSmart Electricians training.

In line with its goal to become a model corporate citizen, Group Training NT started implementing a carbon abatement strategy in mid-2009.
